## THE NEWEST HYBRID ROSES.

The following are all superb hybrids of the latest introduction, and destined to be among the most popular roses in cultivation. Our plants are all strong two-year field grown.

**LORD PENZANCE HYBRID SWEET BRIARS**—A charming class of single roses resembling the eglantine in manner of growth, sweet scented foliage and abundance of flowers which range in color from pure white to gorgeous crimson. We offer a fine selection in several named varieties. Strong plants, 40c each, \$3 per 10, \$25 per 100.

**YELLOW RAMBLER**, (Aglaiia) The first really successful yellow climber and the hardest one yet introduced. A very vigorous grower bearing huge clusters of showy yellow flowers which retain their form and beauty for a surprisingly long time. Extra, own root, plants, 40c each, \$3 per 10, \$20 per 100.

**HYBRID WICHURIANA or MEMORIAL ROSES.**—These are among the most beautiful of hardy trailing or climbing roses, of rapid growth, with glossy foliage free from enemies, and an abundance of deliciously fragrant flowers, both single and double. We offer a fine selection of colors ranging from white through daintiest flush to deep rich pink, 60c each, \$5 per 10, \$45 per 100.

Fruit sold for 10 cts. per quart when other varieties were selling for 5 to 7 cts.

CUMBERLAND RASPBERRY COMPARED WITH WILSON BLACKBERRY

The New Black-cap Raspberry

## CUMBERLAND

(TRADE MARK)

**This new Raspberry** is placed upon the market after having been thoroughly tried for a long period of years. It originated some nine years ago with Mr. David Miller, a life-long horticulturist and fruit-grower, located near Harrisburg, Pa., who has during all this time carefully and thoroughly tested it under all conditions. It is now offered with the full assurance that it is the **most profitable and desirable market variety yet known**, because of its **immense size, firmness and great productiveness**, well entitling it to the above designation of "**the Business Black-Cap.**" Its qualities we take up in what we consider the order of their importance, mentioning first of all that of

**Hardiness.**—The CUMBERLAND has undergone a temperature of 16 degrees below zero, unprotected, without injury—a temperature which badly crippled similarly situated plants of Gregg, Shaffer, Cuthbert, etc. In this most important respect, therefore, this new berry will not be found wanting.

**Productiveness.**—The CUMBERLAND is of wonderful productiveness, producing regularly and uniformly very large crops. The cut on the first page of this circular, which was made from a photograph of an average cluster, will give some idea of how plentifully the fruit is borne.

**In size, the fruit is simply enormous**, far surpassing any other variety. The berries run seven-eighths and fifteen-sixteenths of an inch in diameter, and, as will be seen from the accompanying report of Mr. Charles Beaver, a prominent Harrisburg fruit dealer, sold for 10 cents per quart when other varieties were selling for 5 cents to 7 cents per quart.

**Quality.**—In quality it is similar and fully equal to Gregg, which has always been considered the finest of the Black-caps in this respect.

# CUMBERLAND (Trade Mark) THE "BUSINESS BLACK - CAP" LARGEST BLACK RASPBERRY KNOWN

Fruit sold for 10 cts. per quart when other varieties were selling for 5 to 7 cts.

**Firmness.**—In spite of its extremely large size, the CUMBERLAND is possessed of unusual firmness, and is thus well adapted for standing long shipments. It will be noticed that this quality is especially remarked upon in most of the testimonials appended hereto.

**The season of ripening** varies, of course, in different latitudes, but can be best designated by comparison with other varieties. It follows Palmer and Souhegan (or Tyler), and precedes Gregg a short time, making it what we may call a midseason variety.

**Vigor and Healthfulness.** The CUMBERLAND is an unusually strong and vigorous grower, throwing up stout, stocky canes, well adapted for supporting their loads of large fruit. It has also shown itself remarkably free from that scourge of its family, anthracnose, it having been unaffected by this disease even when other varieties nearby were suffering very badly therefrom.

**The parentage** of the CUMBERLAND is somewhat doubtful. It is thought, however, to be a seedling from Gregg, with a dash of blackberry blood in it. The CUMBERLAND is a true raspberry, and shows no trace of blackberry blood, unless the elongated form of the fruit is evidence of it, but it may be of interest to state that several seedlings from the CUMBERLAND have had true blackberry foliage.

## THE "BUSINESS BLACK-CAP" LARGEST BLACK RASPBERRY KNOWN

Fruit sold for 10 cts. per quart when other varieties were selling for 5 to 7 cts.

## The Opinions of Other Horticulturists and Nurserymen.

From Charles Beaver, Fruit Dealer, Harrisburg, Pa.

"I handled some of the CUMBERLAND Black Raspberries, which were the finest I ever saw, and which were selling in our market at 10 cents per quart when other varieties were offered at 5 cents to 7 cents per quart. I consider it a remarkable fruit of its kind."

From Gabriel Hiester, Harrisburg, Pa. (of the Pennsylvania State Agricultural College).

"I saw the Raspberries referred to (CUMBERLAND) growing on the grounds of Mr. Miller, and was very much pleased with them. The canes were remarkably strong and healthy, and bore a uniformly large crop of the **largest Black Raspberries I have ever seen**. Many of them were as large as Lawton Blackberries, and when fully ripe they are sweet and well flavored. I consider it an acquisition to our list of small fruits."

From Prof. L. H. Bailey, Ithaca, N. Y.

"The Black Raspberries which you sent us have not yet ceased to be the wonder of everyone who saw them, and I certainly think, if the variety is productive and behaves well in the field, that it ought to be introduced."

From E. H. Cocklin (a prominent Fruit Grower), Bowmansdale, Pa.

"During an experience of fifty years among small fruits, as well as in all other branches of horticulture, and after having tested nearly all the novelties as they appeared, I **have never seen anything to equal your Cumberland Raspberry**, as seen on your half-acre plot of that variety. The berries were just ready to pick for the first time. The sturdy, vigorous canes were bending with the largest fruit, many specimens measuring three-fourths of an inch in diameter, and more in length. In form it is unlike any other Black-cap, being long, or thimble-shaped. Color black, without bloom. Flavor equal to Gregg, which, for flavor, we consider best. Firm as Gregg, and an excellent keeper. The basket of berries you sent kept for several days without injury. The fact that it has stood 16 degrees below zero the present winter without injury places it among the ironclad varieties."

From J. W. Kerr, Denton, Md.

"There is no horticultural effervescence in me; otherwise, I would bubble over or burst when I look at the fruit on those three plants of CUMBERLAND Raspberry. I have grown Mammoth Cluster and Gregg that were very fine, but **this Cumberland is really a marvel**. Fifteen-sixteenths of an inch diameter was the measure of as large a berry as I saw of it, but they were all large. I let the plants carry all the fruit they set, and they were very full. If this season's behavior is a safe criterion to judge by, I pronounce it vastly superior to any Black-cap I know anything of. I never knew any of its type to be so long in form as it is."

From Amos Miller (Small Fruit Grower), Columbus, Ohio.

"Your inquiry as to the new CUMBERLAND Raspberry received. With regard to its standing the extreme cold of the latter part of January, **16 degrees below zero**, I am pleased to say it **shows no signs of injury**. I believe it is perfectly hardy. We expect to cut our fruiting plantations of Gregg clear to the ground. Cold and anthracnose have about killed everything to within two feet of the ground. Peaches and Japan Plums all gone, and cherries badly injured."

From Slaymaker & Son, Dover, Del.

"The samples of Black-cap Raspberries were by far the largest we have ever seen. We held them to test their **standing-up properties**, which we found to be **unusually good**. We were well pleased with the berry."

From Storrs & Harrison Co., Painesville, O.

"**Certainly one of the finest specimens of Black-cap Raspberries that we ever saw.**"

From Wm. Parry, Pomona, N. J.

"The package of Black Raspberries was received in excellent condition June 30. We make it our business to procure and test all the promising new varieties as they come before the public, but **the Cumberland exceeds any that we have seen**. Selected specimens measured one inch across, were firm, very black, showing but little, if any, bloom — so objectionable in some Black-caps — while the quality was all that could be desired. Judging from the cluster of berries, it must be very productive."

From Geo. S. Josselyn,  
Fredonia, N. Y.

"The Raspberries arrived just before I left. They were delicious. The Gregg is the favorite about here, but these were **larger than Gregg and had not nearly as many seeds**, which is a decided advantage."
